Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 25.122; Variance 33.379; scale 0.753

-!- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS MONOCYTES, LYMPHOCYTES,
--- EDASOPHILS AND EOSINOPHILS, BUT NOT NEUTROPHILS. SIGNALS THROUGH
CCR2B AND CCR3 RECEPTORS. PLAYS A ROLE IN THE ACCUMULATION OF
LEUKOCYTES AT BOTH SIDES OF ALLERGIC AND NONALLERGIC INFLAMMATION.
MAY BE INVOLVED IN THE RECRUITMENT OF MONOCYTES INTO THE ARTERAL
WALL DUBLING THE DISEASE PROCESS OF ARTHEROSCLEROSIS. MAY PLAY A
ROLE IN THE MONOCYTE ATTRACTION IN TISSUES CHRONICALLY EXPOSED TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MASS SPECTROMETRY: MW-9314; MW_ERR=30; METHOD-MALDI; RANGE=17-98.
MASS SPECTROMETRY: MW-8760; MW_ERR=30; METHOD-MALDI; RANGE=22-98.
MASS SPECTROMETRY: MW-875; MW_ERR=30; METHOD-MALDI; RANGE=24-98.
INDUCTION: BY INTERLEUKIN-1 AND TMF-ALPHA.
TISSUE SPECIFICITY: WIDELY EXPRESSED. FOUND IN SMALL INTESTINE, THYMOS, COLON, LUNG, TRACHEA, STOMACH AND LYMPH NODE. LOW LEVELS SEEN IN THE PULMONARY RATERY SMOOTH MUSCLE CELLS.

- :- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS MONOCYTES. THIS PROTEIN CAN BIND HEPARIN.
                                                                                     SUBMITTED (OCT-1995) TO EMBL/GENBANK/DDBJ DATA BANKS.
SUBMITTED (OCT-1995) TO EMBL/GENBANK/DDBJ DATA BANKS.

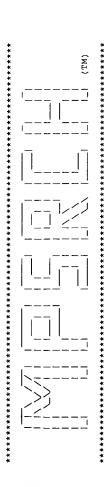

-1- FUNCTION: HAS WEAK ACTIVITIES ON HUMAN MONOCYTES AND ACTS VIA RECEPTORS THAT ALSO RECOGNIZE MIP-1 ALPHAN IT INDUCED INTRACELLULAR CA2+ CHANGES AND ENZYME RELEASE, BUT NO CHEMOTAXIS, AT CONCENTRATIONS OF 100-1,000 NM, AND WAS INACTIVE ON T LYMPHOCYTES, NEUTROPHILS, AND EOSINOPHIL LEUKOCYTES. ENHANCES THE PROLIFERATION OF CD34 MYELOID PROCENITOR CELLS.
-1- TISSUES PREDEITIVE: EXPRESSED CONSTITUTIVELY IN SEVERAL NORMAL TISSUES. SPLEEN, LIYER, SKELETAL AND HEART MUSCLE, GUT, AND BONE MARROW, PRESENT AT HIGH CONCENTRATIONS (1-80 NM) IN PLASMA.
-1- SIMILARITY: EBLONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE

Two inflammatory mediator cytokine genes are closely linked and variably amplified on chromosome 17q.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ##Cross-references EMBL: 552149; NID: 934750; PID: 9296666

This protein is a member of a "small inducible" or "activation specific" gene family, is likely to be an early-acting interleukin, and is the product of a putative G0/G1 switch gene.
                                                                                                                                                                                                                                                                                                                                                                                                             #authors Blum, S.; Forsdyke, R.E.; Forsdyke, D.R.

Mean 18.046; Variance 69.849; scale 0.258 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Analogues of natural stem cell inhibitors, such as LD78 and MIP-
harlogues of natural stem cell inhibitors, such as LD78 and MIP-
beyond certain stages (e.g. dodecamer), have improved solution
beyond certain stages (e.g. dodecamer), have improved solution
properties leading to enhanced productivity and greater therapeutic
utility as stem cell protective agents. The analogues may be used
in tumour therapy, psoriasis or other diseases involving hyper-
host pref. LD78 analogues are Phel2>Gln, Lys44>Ser, Arg1>Glu (with
Gln18>Glu) and, esp., Asp26>Ala and Glu66>Ser. Pref. MIP-lalpha
snanlogues correspond to the pref. LD78 analogues.
                                                                                                                                                                                                                                                                                               WPI; 93-227322/28.
Protein with stem cell inhibition activity, e.g. LD78 or MIP-1 alpha - unable to form stable multimer higher than dodecamer,

bisclosure; Page 181-182; 294pp; English.

The secondary and territary structure of LD78 and MTP-lalpha have
been shown to be almost identical. Only a difference in the nature
of a side-chain or charge interaction in the vicinity of Trp57 is
of a side-chain or charge interaction in the vicinity of Trp57 is
conserved for the two proteins. Despite having a similar secondary
structure to LD78 and MTP-lalpha, near u.v. c.d. studies show ACT2
and intensity of the spectrum. This provides strong evidence that
LD78 and not ACT2 is the human homologue of MTP-lalpha.

Analogues of natural stem cell inhibitors, such as LD78 and MTP-
lalpha, having mutations to prevent or reduce multimer formation
beyond certain stages (e.g. dodecamer), have improved solution
cutility as stem cells protective agents. The analogues may be used
in tumour therapy, psoriasis or other diseases involving hyper-
cutility as stem cells.

England and, esp., Asp28-Ala and Glu66>Ser. Pref. MTP-lalpha
senalogues
conneced.

While you shall work the parachemokine, ZCHEMO-8 - used to develop products for treating e.g. ischaemia, reperfusion, wound healing, products for treating e.g. ischaemia, reperfusion, wound healing, by products for treating e.g. ischaemia, reperfusion, wound healing, by inflammantion, asthma or infections bisclosure; Page 93: 131pp; English.

CC This sequence represents a human beta chemokine, ZCHEMO-8 is isolated. CC describe a method in which a novel beta chemokine, ZCHEMO-8 is isolated. Altered levels of ZCHEMO-8 may be indicative of pathological conditions, including infections, cancer, myelopoletic disorders, autoimmune cells of disorders and immunodeficiencies. The ZCHEMO-8 polypeptides can be used, c.g. to reduce the damage in ischaemic and reperfusion injuries, in a wound healing regime to stimulate an infiltration of immune cells (e.g. monocytes, neutrophils, T lymphocytes or basophils) to a wound site to facilitate healing. ZCHEMO may be used to mobilise progenitor cells from the marrow into the peripheral blood for transplants. ZCHEMO-8 polypeptides could be used to further define the role of chemokines in mediating suppression of HIV replication in CAH T-cells and limiting progression of HIV infection to AIDS. Use may be made of ZCHEMO-8 polypeptides during chemotherapy or radiation therapy, to protect haematopietic cells. ZCHEMO-8 antagonists may be ade defective cells. ZCHEMO-8 antagonists may be assented to damachosis, insulin dependent diabetes and systemic lupus erythematosis, rheumatoid arthritis, allergies, asthma or arteriosclerosis. Also benefit come and effective diseases. Antagonists may be used to dampen or inactivate confidence of the declined immune response. The products can also be used confidence.

                                        for monitoring the immune system.
Disclosure, fig 2; 16pp; English.
H400 polypeptide (see N90532). This protein is specifically produced by activated T cells, and is useful for detecting cells which produce H400 or mRNA transcripts of H400 for monitoring the immune system. Claims 1 and 2 give polypeptides corresp. to the featured peptides above.
                                                                                                                                                                                                                                                Score 91, DB 1, Length 91;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Expression of pure mammalian macrophage inducible proteins in yeast - to produce MIP for treatment and diagnosis of cancer, The section, myelopojetic dysfunction, etc.

Example 3; Fig 1; 38pp; English.

This sequence was deduced from the nucleotide sequence 023729.

This sequence was produced by cloning into the expression vector pyMIP300. The human MIP-lalpha sequence was derived from the lambda gilo cDNA clone hMIP1-13a, and the GAPDH promoter sequence, alpha factor transcription terminator derived from plasmid pGAII, cappa factor transcription terminator derived from plasmid pGAII, construction of which is described in patent application EP034-274. Recombinantly produced MIP proteins have diagnostic and therapeutic utility for detecting and treating infections, cancer, myelopojetic dysfunction and autoimmune diseases. Although not directly cytotoxic for WEHI tumor cells, MIP-I treated macrophages
                                                                                                                                                                                                                                                                                Suppression of megakaryocytopoiesis - by administration of megakaryocytopoiesis - by administration of macrophage inflammatory protein-1 or -2 Disclosure; Page 17: 26pp; English.

A claimed method for reducing the no. of circulating platelets in the bloodstream of a mammal comprises admin. of MIP-1 and/or MIP-2 or their analogues to induce such a reduction. The MIP-1, MIP-2 or analogue may be operatively linked to a carrier. The MIPs can be used to inhibit megakaryocytopoiesis to effect in vivo reduction of platelet nos. They can be used to treat disorders with excessively high platelet counts such as thrombocytosis, stroke, pulmonary emboli
                                                                                                                                 Macrophage inflammatory protein; megakaryocytopoiesis; MIP-1; MIP-2; thrombocythemia; reactive thrombocytosis; stroke; emboli; platelet; myeloproliferative disorder.

tumour targets. MTP-1 treatment stimulated proliferation of mature tissue macrophages; this effect was synergistic with both GSF-1 and GM-CSF. Purified preparations of the recombinantly derived MTP-lalpha peptide alone induced TNF and IL-6 in macrophages, but MTP-labet adid not. As little as twofold excess MTP-lbeta blocked bioactivity defined for native MTP-1 and recombinant MTP-lalpha blocked bioactivity defined for native MTP-1 and recombinant MTP-lalpha errythropoietin of proliferation of less differentiated sequence 92 AR.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; 84pp; English.
The lymphokine/cytckine-like proteins are associated with the inflammatory response and/or have mitogenic activities. Antigens raised to the proteins may be useful in detection and purification, especially in bloassays of various tumour cells or genetic defects in the inflammatory response.
                                                                                                                                                                                                                                                                                                                                                                                                  .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents a human chemokine MIP-lbeta domain, derived from sequence represents a human chemokine MIP-lbeta domain, derived from HUMACT2A. This sequence is used in the production of a construct comprising an isolated polynucleotide encoding a chimeric polypeptide evalently attached to at least 1 chemokine polypeptide covalently attached to at least 1 thetrologous polypeptide. By including a heterologous protein in the construction, the chimeric polypeptides will have longer and increased biological activity and can direct the chemokine to a particular site. The chimeric polypeptides can also be designed to inhibit or desensitise chemokine receptors. They can be used to affect the chemotactic recruitment of migratory cells, e.g. for stimulating or inhibiting angiogenesis, for regeneration of bone, cartilage, ligament or for treating or preventing inflammatory or autoimmune disorders. They can also be used as vaccine adjuvants or to enhance the activity of antigen corresponding to the chimeric polypeptide may also be useful therapeutics for both conditions associated with the chemokine corresponding to the chemokine domain of the chimeric polypeptide and also in the treatment of some forms of cancer where abnormal expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                02-DEC-1998 (first entry)

Human chemokine MIP-lbeta domain protein fragment.

Chemokine, MIP-lbeta; chimeric; human; heterologous protein; inhibitor; receptor; chemotaxis; migratory cell; angiogenesis; bone; regeneration; cartilage; ligament; tendon; bone marrow; transplant; inflammation; autoimmune disorder; vaccine adjuvant; antigen presenting cell; cancer; HIV; human immunodeficiency virus; therapy; prevention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                      The lymphokine/cytokine-like proteins are associated with the inflammatory response and/or have mitogenic activities. Antigens raised to the proteins may be useful in detection and purification, especially in bioassays of various tumour cells or genetic defects in the inflammatory response.

The best copy of the sequence available is still unclear and some errors in the sequence may occur.

Sequence 92 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New chimeric polypeptide(s) - comprise chemokine polypeptide covalently linked to heterologous polypeptide, used for, e.g. chemotactic recruitment of migratory cells Example 1; Page 53; 69pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                   Screening for cpds. With anti-heparanase activity - by detecting screening for cpds. With anti-heparan sulphate degradation, potentially useful for treating arthritis, restenosis, cancer. Claim 13: Page 47: 60pp; English. Purified heparanases, prepared under reducing conditions and activated with transglutaminase, are given in R70786-804. Most are prepared by reverse transcription of mRNA from activated human leukocytes, then cloning of the cDNA into pVL1392 baculovirus vector, and expression in Sf9 cells in the presence of reduced Sequence 92 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Probes raised to the gene product may be used in bloassay of the product, useful in detecting tumour cells, genetic defects in the inflammatory response, or in vivo, for the detection of immune system activation. The proteins may also be used to determine the presence of their receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New lymphokine-cytokine-like genes - isolated by subtraction cloning and hybridisation using mRNA from activated peripheral blood T cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ;

This sequence represents a human chemokine MIP-lbeta domain, isolated from CDNA clone MPB-X. This sequence is used in the production of a construct comprising an isolated polynucleotide encoding a chimaric polypeptide which comprises at least 1 chemokine polypeptide covalently attached to at least 1 heterologous polypeptide. By including a attached to at least 1 heterologous polypeptide. By including a have longer and increased biological activity and can direct the chawce longer and increased biological activity and can direct the chemotracial site. The chimaric polypeptides will constitute to a particular site. The chimaric polypeptides will casigned to inhibit or desensitise chemokine receptors. They can be used to affect the chemotractic recruiting transplanted bone marrow cartilage, ligament or tendon, for requenting inflammatory or stimulating or inhibiting anglogenesis, for regeneration of bone, cartilage, ligament or tendon, for recruiting transplanted bone marrow calls to bone marrow, or for treating or preventing inflammatory or autoimmune disorders. They can also be used as vaccine adjuvants or to enhance the activity of antigen presenting cells and for treating or preventing HIV infection. Neutralising antibodies binding to the chimeric polypeptide and also in the treatment of some forms of the chameric polypeptide and also in the treatment of some forms of cancer where abnormal expression of the chemokine is involved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  laipha, having mutations to prevent or reduce multimer formation beyond certain stages (e.g. dodecamer), have improved solution properties leading to enhanced productivity and greater therapeutic utility as stem cell protective agents. The analogues may be used in tumour therapy, psoriasis or other diseases involving hyperproliferative stem cells.

Most pref. LD78 analogues are Phel25Gln, Lys44>Ser, Arg17>Glu (with Galn18>Glu) and, esp., Asp26>Ala and Glu66>Ser. Arg17>Glu (with analogues correspond to the pref. LD78 analogues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             providing better tissue penetration

Protein with stem cell inhibition activity, e.g. LD78 or MIP-I alpha - unable to form stable multimer higher than dodecamer,
The providing better tissue penetration
Example 124; Page 94; 294pp; English.
Example 124; Page 94; 294pp; English.
Analogues of natural stem cell inhibitors, such as LD78 and MIP-
Calalpha, having mutations to prevent or reduce multimer formation
beyond certain stages (e.g. dodecamer), have improved solution
conserved seafing to enhanced productivity and greater therapeutic
cutility as stem cell protective agents. The analogues may be used
in tumour therapy, psoriasis or other diseases involving hyper-
consolierative stem cells.
Canalogues are Phel2>Gln, Lys44>Ser, Arg17>Glu (with

Database:

swiss-prot37 1:swissprot

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 25.586; Variance 32.187; scale 0.795

SUBMITTED (DEC-1997) TO EMBL/GENBANK/DDBJ DATA BANKS.
1- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTES MONOCYTES, LYMPHOCYTES,
BASOPHILS AND EOSINOPHILS, BUT NOT NEUTROPHILS. SIGNALS THROUGH
CCR2B AND CCR3 RECEPTORS. PLAYS A ROLE IN THE ACCUMULATION OF
LEUKOCYTES AT BOTH SIDES OF ALLERGIC AND NONLLERGIC INFLAMMATION.
MAY BE INVOLVED IN THE RECRUITMENT OF MONOCYTES INTO THE ARTERIAL
WALL DURING THE DISEASE PROCESS OF ARTHEROSCLEROSIS. MAY PLAY A
ROLE IN THE MONOCYTE ATTRACTION IN TISSUES CHRONICALLY EXPOSED TO
